# M. A. DEGREE END SEMESTER EXAMINATION APRIL 2017 SEMESTER - 2: ECONOMICS COURSE: 16P2ECOT10 - STATISTICAL TOOLS FOR ECONOMIC

## ANALYSIS

(For Regular - 2016 Admission)

Time: Three Hours

Max. Marks: 75

(Use of Scientific calculators and statistical tables permitted.)

### PART A

Answer any **eight** questions. Each question carries **2** marks

- 1. Define random variable with examples.
- 2. What do you understand by probability mass/density function?
- 3. What are the properties of cumulative distribution function?
- 4. What are the properties of mathematical expectation?
- 5. Define raw moments.
- 6. Define Poisson distribution and point out its relevance.
- 7. Define lognormal distribution.
- 8. Explain the concept of sampling distribution.
- 9. Distinguish between parameter and statistic with examples.
- 10. What is point and interval estimation?
- 11. Define the standard normal distribution.
- 12. Write the mean and variance of the chi-square distribution.

 $(2 \times 8 = 16)$ 

## PART B

Answer any **seven** questions. Each question carries **5**marks

- 13. Derive the mean and variance of binomial distribution .Given that mean =6 and variance =4, find the value of n and p.
- 14. If a discrete random variable has the probability function as,

| x:      | 0         | 1      | 2   | 3    | 4  | 5  | 6  | 7  | 8 |
|---------|-----------|--------|-----|------|----|----|----|----|---|
| P(x):   | С         | 2c     | Зc  | 5c   | 5c | 4c | Зc | 2c | С |
| Find i) | the value | e of c | ii) | E(x) |    |    |    |    |   |

15. If  $f(x) = e^{-x}$ ,  $0 < x < \infty$ , Find the mean and variance of the distribution.

- 16. The traffic police recorded an average of 3 road accidents per week .The number of accidents is distributed as Poisson distribution. Find the probability of
  - i) at most one accident per week ii) exactly two accidents per week.
- 17. Explain i) Type I and Type II errors ii) Significance level and power of the test.
- The sample mean from a random sample of size 50 drawn from a population has the value 52.5. The population standard deviation is known to be equal to 16.

Find 95% confidence interval for the population mean.

- 19. Explain the concept of null and alternative hypotheses, Acceptance region a and rejection region.
- 20. Define student's 't' distribution .What are the basic assumptions for student's t test.
- 21. A manufacturer of dry cells claimed that average life of their cells is 24.0 hours. A sample of 10 cells had mean life of 22.5 hours with a standard deviation of 3.0 hours. On the basis of available information, test whether the claim of the manufacturer is correct.
- 22. Explain the method of testing proportion of single population.

 $(7 \times 5 = 35)$ 

#### PART C Answer any *two* questions. Each question carries 12 marks

23. Describe the Chi-square distribution and test of independence.

Data on the sex and preference for the colour are given in the table. Test whether there is any relationship between sex and preference for the colour.

| colour | Sex   |         |       |  |  |  |
|--------|-------|---------|-------|--|--|--|
| Colour | Males | Females | Total |  |  |  |
| Green  | 40    | 60      | 100   |  |  |  |
| Yellow | 30    | 20      | 50    |  |  |  |
| White  | 30    | 20      | 50    |  |  |  |
| Total  | 100   | 100     | 200   |  |  |  |

24. Explain the concept and assumptions of ANOVA.

The following table relate to the production in kgs. of three machines A,B,C. Sacred Heart College (Autonomous) Thevara Page 2 of 3

| А | 14 | 16 | 18 |    |   |
|---|----|----|----|----|---|
| В | 14 | 13 | 15 | 22 |   |
| C | 18 | 16 | 19 | 19 | 2 |

Is there any significant difference in the production of three machines?  $\alpha{=}0.05$ 

25. What are the properties of normal distribution?

The life expectancy of light bulbs whose life times are normally distributed with a mean life of 750 hours with a standard deviation of 80 hours. What is the probability that a light bulb will last 850 hours ii) between 780 and 850 hours.

26. Explain the paired't' test. The results of IQ test are given below. Find out whether there is any change in IQ after the training programme, given  $\alpha$ =0.05

| Candida<br>te | 1   | 2   | 3   | 4   | 5   | 6   | 7   |
|---------------|-----|-----|-----|-----|-----|-----|-----|
| IQ<br>before  | 112 | 120 | 116 | 125 | 131 | 132 | 129 |
| IQ after      | 120 | 124 | 118 | 129 | 136 | 136 | 125 |

 $(12 \times 2 = 24)$
